Why this matters now

Give senior leaders a practical way to use Microsoft Copilot in their own decisions. Build a sourced board brief, a safe-use charter, a 30-seat pilot plan and a value scorecard, then decide whether to scale. The focus is executive judgment and business results.

Course description

AI Transformation with Microsoft Copilot is a three-day WSQ course for executives and senior managers. Participants use Microsoft 365 Copilot in Chat, Word, PowerPoint, Outlook, Teams and Excel to prepare strategic briefs, compare options, coordinate decisions and analyse business value. A synthetic organisation case lets them practise data-use boundaries, human approval, adoption leadership and evidence-based investment decisions. The course draws on the business-use themes of Microsoft AI Business Professional (AB-730) and the strategic planning themes of AB-100; it is not an exam-preparation course and does not require coding or agent development.

Course topics

01

Topic 1: Set the Copilot Transformation Strategy and Lead by Example

Transformation ambition • Value pool map • Executive sponsor • Stakeholder alignment • Success definition • Copilot Chat briefing • Question refinement • Source challenge • Scenario comparison • Executive follow-up • Word strategy memo • Recommendation logic • PowerPoint board story • Decision appendix • Leadership communication

02

Topic 2: Govern Copilot Use and Protect Business Decisions

Information boundary • Permission reality • Source reliability • Human approval • Responsible-use rule • Risk appetite • Incident response • Quality challenge • Policy ownership • Board assurance

03

Topic 3: Integrate Copilot into the Executive Operating Model

Executive meeting • Outlook decision flow • Cross-functional handoff • Copilot integration choice • Agent opportunity • Vendor and partner review • Pilot operating model • Leadership role modelling • Change communication • Decision escalation

04

Topic 4: Measure Value, Scale Adoption and Report to the Board

Use-case portfolio • Adoption baseline • Enablement design • Feedback loop • Scale gate • Excel value model • Benefit confidence • Cost of ownership • Sensitivity test • Investment decision • Quality scorecard • Customer outcome • Board reporting • Next-quarter roadmap • Executive decision rehearsal

Learning outcomes

- LO1** Develop technology implementation plans and business processes for Microsoft Copilot.
- LO2** Develop control procedures for Microsoft Copilot to manage security.
- LO3** Evaluate the integration of Microsoft Copilot to ensure alignment with business objectives.
- LO4** Develop optimization plans for Microsoft Copilot to improve business operations.
