

Facilitator Guide

AI Transformation with Microsoft Copilot

TGS-2024044051 • v2.0 • 27 September 2026 • WSQ • 3 days / 24 hours

Tertiary Infotech Academy Pte Ltd • UEN 201200696W

Trainer controlled document. Use synthetic learner data only.

Executive delivery intent

Guide senior leaders through a synthetic Northstar Service decision. The course uses Microsoft Copilot directly in Chat, Word, PowerPoint, Outlook, Teams and Excel, then tests the human judgment required to turn drafts into responsible business decisions. AB-730 informs direct business use; AB-100 informs strategy and outcome judgment. This WSQ course is not Microsoft certification preparation.

Prepare before class

- Check the current v2.0 slide deck, Learner Guide, Lesson Plan, Labs 01–10, and candidate WA/PP papers against TGS-2024044051.
- Open each lab's source pack, prompts, executive brief and value-model workbook. Confirm the synthetic figures and formulas are readable.
- If licensed Microsoft 365 Copilot is available, use an approved work account. Keep the offline evidence path ready; never portray a simulation as a live tenant result.
- Ask executives to bring a business decision, success measure and human owner. Use only synthetic case data in shared exercises.

Three-day facilitation sequence

Block	Business work and Copilot use	Trainer checkpoint
Day 1 • LO1	Strategy mandate, Copilot Chat decision brief, Word memo, PowerPoint board story; Labs 01–03	Challenge each claim, baseline and board recommendation.
Day 2 • LO2	Source boundaries, responsible use, governance charter; Labs 04–05	Escalate an unsupported or confidential claim; name approval owner.
Day 2 • LO3 bridge	Teams and Outlook executive cadence; Lab 06	Verify decision, dissent, recipient and external commitment.
Day 3 • LO3–LO4	Integration options, adoption plan, Excel value model, board scorecard; Labs 07–10	Compare as-is, extend, build; label observed values and assumptions.
Day 3 • assessment	WA 60 minutes and PP 60 minutes	Use only candidate papers; keep marking guides controlled.

Learning outcomes and evidence

1. LO1: Develop technology implementation plans and business processes for Microsoft Copilot.
2. LO2: Develop control procedures for Microsoft Copilot to manage security.
3. LO3: Evaluate the integration of Microsoft Copilot to ensure alignment with business objectives.
4. LO4: Develop optimization plans for Microsoft Copilot to improve business operations.

Facilitation moves

- Demonstrate a Copilot draft, then ask leaders which statements they would sign, question or remove. Show the source and human edit.
- For each lab, require a decision artifact with business outcome, source, assumption, counterargument, owner and go/hold/revise gate.
- Treat usage as an adoption indicator, not an outcome. Check comparable work, review time, quality and risk before estimating value.
- Use the five synthetic cases in each lab. An unavailable feature becomes a clearly labelled offline decision exercise, not a fabricated screenshot.

Assessment handoff

The Written Assessment covers K1–K3. The Practical Performance has four tasks covering A1–A5: executive transformation mandate, governance charter, integration decision and value-led board recommendation. Apply the current controlled marking guide and record criterion-level C/NYC evidence.
