

# Lab 01 - Executive transformation mandate

---

TGS-2024044051 | v2.0 | 27 September 2026

Microsoft tool focus: Microsoft Copilot Chat

All Northstar Service names, policies and values are synthetic training material. They are not a claim about a real company or a Microsoft tenant.

## Executive outcome

Produce five short, source-backed decisions for executive transformation mandate. Each decision must show a human owner, uncertainty, measurable result and a go/hold/revise gate.

## Materials in this folder

- source-pack.md - fictional organisation context, policy and five case facts.
- scenario.csv - five decisions, expected outputs and challenge checks.
- prompt-cards.md - copy-ready prompts for each case.
- executive-brief.docx - editable briefing input.
- value-model.csv and value-model.xlsx - synthetic business values and formulas.
- evidence-template.md - decision record to copy for each case.
- workflow-reference.png - official Microsoft Support UI example for orientation, not evidence of this lab.

## Steps

1. Read BRD-1 to BRD-4 in source-pack.md and identify which rule applies to your case.
2. Open scenario.csv and select one case ID. Note its intended decision, named output, challenge and outcome measure.
3. In Microsoft Copilot Chat, sign in with your work account and start a new chat.
4. Copy the matching prompt from prompt-cards.md. Provide only the synthetic source content. Ask Copilot for a first draft, cited facts, assumptions and counterargument.
5. Compare each material statement and number with source-pack.md or value-model.xlsx. Correct or remove unsupported claims. Recalculate net minutes: baseline minus Copilot time minus human review time.
6. Record the decision in a copy of evidence-template.md. State the source, evidence, owner, date, outcome measure and go/hold/revise conclusion.
7. Repeat steps 2-6 for the other four case IDs. Submit all five decisions and the reviewed executive output.

## Acceptance checks

- Five case IDs have five reviewed decision records.
- Every claim or value used to justify a decision cites the supplied source.
- Every record states the strongest challenge or failed test and how it was resolved.
- Any monetary value is labelled as a synthetic assumption, not measured savings.
- The human owner approves external commitments and high-impact decisions.
- The output says “offline simulation” when the live Copilot feature was unavailable.

## Troubleshooting

If Copilot cannot see the source, check your work account and licensing with the trainer. Continue with the local files and mark the work offline. If Copilot invents a figure, remove it and ask for a source-based revision. If two sources conflict, hold the decision and name the owner who will resolve the conflict.

## UI reference

## Workflow reference screenshot

Official Microsoft Support example for orientation; not evidence of your lab result.

The screenshot displays the Microsoft Copilot interface. On the left, a sidebar contains navigation icons. The main area shows a chat conversation where the user has asked Copilot to create a table with 6 rows and 4 columns. Copilot has responded with a table titled "Four-Column Data Table" and provided instructions on how to use it. The table has columns for Name, Assignment, Status, and Estimated. Below the table, there are buttons for "Add sample data to the 6 rows", "Format the dates consistently", and "Convert this table to an Excel-ready format". At the bottom, there is a "Message Copilot" button and a disclaimer: "AI-generated content may be incorrect".

|   | Name | Assignment | Status | Estimated ... |
|---|------|------------|--------|---------------|
| 1 |      |            |        |               |
| 2 |      |            |        |               |
| 3 |      |            |        |               |
| 4 |      |            |        |               |
| 5 |      |            |        |               |
| 6 |      |            |        |               |
