

Northstar Service source pack

All Northstar Service names, policies and values are synthetic training material. They are not a claim about a real company or a Microsoft tenant.

Executive context

Northstar Service is a fictional service organisation. Its leadership is considering a 30-seat Microsoft 365 Copilot pilot. No real customer records are included. The CEO requires a decision that names the business outcome, data owner, reviewer, measure and stop condition.

Current policies

- BRD-1: External customer commitments require human approval by the service director.
- BRD-2: A board recommendation must distinguish measured pilot results from assumptions.
- BRD-3: Confidential source files may be used only by approved roles; an unexpected Copilot citation triggers an access review.
- BRD-4: Unresolved high-impact safety failures require a hold decision.

Case facts

NS-16 - Information boundary

- Business input: Synthetic confidential account file
- Expected decision artifact: Data-use decision table
- Named review gate: Data owner approves permitted sources
- Challenge to test: Sensitive source is broadly shared
- Outcome measure: Restricted exposures found in review

NS-17 - Permission reality

- Business input: Two roles with different access
- Expected decision artifact: Access-test evidence record
- Named review gate: Security owner reviews unexpected access
- Challenge to test: User receives material outside role
- Outcome measure: Unexpected accessible files

NS-18 - Source reliability

- Business input: Current and retired policies
- Expected decision artifact: Claim-verification worksheet
- Named review gate: Reviewer checks every material statement
- Challenge to test: Retired policy cited as current
- Outcome measure: Supported claims divided by claims

NS-19 - Human approval

- Business input: Draft external customer commitment
- Expected decision artifact: Approval decision record
- Named review gate: Named owner signs external commitment
- Challenge to test: Copilot text is sent without review
- Outcome measure: Unapproved external actions

NS-20 - Responsible-use rule

- Business input: A sensitive executive scenario
- Expected decision artifact: One-page responsible-use charter
- Named review gate: Legal and risk owners approve wording
- Challenge to test: Charter is too vague to apply
- Outcome measure: Exceptions resolved within SLA

Synthetic source challenge

CURRENT-1 (approved, internal): Service directors approve external commitments before sending. This is the current rule. RETIRED-1 (superseded): A draft response may be sent automatically without director review. Do not rely on this statement. CONFIDENTIAL-1 (restricted, synthetic): Account NS-0007 has a fictional renewal discussion. Only the named service director may use it; other roles must not paste it into Copilot.
