

Northstar Service source pack

All Northstar Service names, policies and values are synthetic training material. They are not a claim about a real company or a Microsoft tenant.

Executive context

Northstar Service is a fictional service organisation. Its leadership is considering a 30-seat Microsoft 365 Copilot pilot. No real customer records are included. The CEO requires a decision that names the business outcome, data owner, reviewer, measure and stop condition.

Current policies

- BRD-1: External customer commitments require human approval by the service director.
- BRD-2: A board recommendation must distinguish measured pilot results from assumptions.
- BRD-3: Confidential source files may be used only by approved roles; an unexpected Copilot citation triggers an access review.
- BRD-4: Unresolved high-impact safety failures require a hold decision.

Case facts

NS-36 - Use-case portfolio

- Business input: Twelve candidate workflows
- Expected decision artifact: Ranked opportunity portfolio
- Named review gate: Reject ownerless or unsafe use case
- Challenge to test: Highest score hides weak data
- Outcome measure: Validated value per use case

NS-37 - Adoption baseline

- Business input: Usage by role and department
- Expected decision artifact: Adoption baseline chart
- Named review gate: Separate sign-in from productive use
- Challenge to test: Licence assignment counted as adoption
- Outcome measure: Weekly active users per cohort

NS-38 - Enablement design

- Business input: Three role-specific skill gaps
- Expected decision artifact: 90-day enablement calendar
- Named review gate: Manager commits time for practice
- Challenge to test: One generic training suits no one
- Outcome measure: Practice completion by role

NS-39 - Feedback loop

- Business input: Pilot questions and complaints
- Expected decision artifact: Prioritised improvement backlog
- Named review gate: Assign owner and due date
- Challenge to test: Prompt advice hides a source defect
- Outcome measure: Median defect closure time

NS-40 - Scale gate

- Business input: Pilot adoption, quality and risk data
- Expected decision artifact: Wave-two decision paper
- Named review gate: Every critical threshold passes
- Challenge to test: Average score hides a severe failure
- Outcome measure: Criteria passed divided by required
