

WSQ COURSE / WSQ AI and Microsoft Copilot

AI Transformation with Microsoft Copilot

Plan, secure, integrate and measure Copilot at work

TGS-2024044051

3 days

DURATION

24 hours including 2
hours of

TRAINING

Beginner

LEVEL

12 Woodlands Square
#07-85/86/

VENUE

Why this matters now

Turn Microsoft Copilot from isolated prompts into a controlled business improvement programme. Build an implementation plan, test security gates, design an agent workflow, and measure pilot value using evidence your stakeholders can review.

Course description

AI Transformation with Microsoft Copilot equips participants to plan, design, implement and evaluate AI-powered solutions using Microsoft 365 Copilot, Copilot Studio, Microsoft Foundry, Power Platform and connected business workflows. Learners work with organisational data, files and application context while preserving privacy and security. They design custom agents, prompts and integrations; test output quality, prompt injection and sensitive-data exposure; and use telemetry and ROI measures to decide whether to scale. Synthetic cases and structured labs keep practical evidence separate from live customer data.

Course topics

01

Topic 1: Microsoft 365 Copilot Implementation and Business Process Transformation

Tenant readiness • License allocation • Graph permission scope • Business-process mapping • Opportunity scoring • Prompt context window • Grounded retrieval • Word proposal draft • Excel service analysis • PowerPoint executive story • Outlook response workflow • Teams meeting synthesis • Adoption rollout

02

Topic 2: Microsoft Copilot Administration, Security and Responsible AI

Identity and MFA • Sensitivity labels • DLP boundaries • SharePoint oversharing • Retention and records • Audit event trail • Prompt-injection boundary • Fabrication review • Tool permission design • Environment policy • Incident response • Human decision gate

03

Topic 3: Copilot Integration, AI Agents and Cross-Platform Workflows

Agent purpose contract • Knowledge-source curation • Citation evaluation • Copilot Studio topic routing • Connector action • Approval action • Power Automate flow • Dynamics 365 context • Foundry model choice • MCP tool registration • A2A handoff • Multi-agent orchestration • Cross-platform error handling

04

Topic 4: AI Optimization, Performance Monitoring and Business Value Assessment

Usage telemetry • Agent quality rubric • Golden test set • Time-saved estimate • ROI model • License optimization • Latency budget • Error budget • Feedback triage • Experiment design • Rollout wave gate • Retirement control

Learning outcomes

- LO1** Develop technology implementation plans and business processes for Microsoft Copilot.
- LO2** Develop control procedures for Microsoft Copilot to manage security.
- LO3** Evaluate the integration of Microsoft Copilot to ensure alignment with business objectives.
- LO4** Develop optimization plans for Microsoft Copilot to improve business operations.
