

Northstar Service source pack

All Northstar Service names, policies and values are synthetic training material. They are not a claim about a real company or a Microsoft tenant.

Executive context

Northstar Service is a fictional service organisation. Its leadership is considering a 30-seat Microsoft 365 Copilot pilot. No real customer records are included. The CEO requires a decision that names the business outcome, data owner, reviewer, measure and stop condition.

Current policies

- BRD-1: External customer commitments require human approval by the service director.
- BRD-2: A board recommendation must distinguish measured pilot results from assumptions.
- BRD-3: Confidential source files may be used only by approved roles; an unexpected Copilot citation triggers an access review.
- BRD-4: Unresolved high-impact safety failures require a hold decision.

Case facts

NS-36 — Map a work journey

- Business input: Chat, workflow and agent opportunities
- Expected decision artifact: Future-state journey map
- Named review gate: Keep human decisions visible
- Challenge to test: The same task is duplicated
- Outcome measure: Time to completion

NS-37 — Choose a first cohort

- Business input: Thirty synthetic seats across three teams
- Expected decision artifact: Pilot cohort plan
- Named review gate: Sponsor signs selection criteria
- Challenge to test: Licence count replaces opportunity
- Outcome measure: Productive pilot users

NS-38 — Prepare managers

- Business input: Role questions and practice needs
- Expected decision artifact: Manager enablement brief
- Named review gate: Managers can explain limits and outcomes
- Challenge to test: Training only shows features
- Outcome measure: Practice completion

NS-39 — Collect user feedback

- Business input: Synthetic comments from first two weeks
- Expected decision artifact: Improvement backlog
- Named review gate: Assign an owner and due date
- Challenge to test: Complaints about bad sources are called prompt errors
- Outcome measure: Issues closed

NS-40 — Set scale gate

- Business input: Adoption, quality and risk observations
- Expected decision artifact: Scale decision checklist
- Named review gate: Critical failure blocks scale

- Challenge to test: Average score hides severe error
- Outcome measure: Required gates passed
